Goals

- [ ] Commit last stuff
- [x] ~~Domain migration~~
- [ ] Make sure code is RUNNING (full run through)
- [ ] Add docs (like the /docs folder)
    - [x] ~~Upload final SRS~~
    - [ ] Upload Design and V&V Doc
        - [ ] Update to include test results
    - [ ] Add how-to-run guide
    - [ ] Add meeting minutes
- [ ] Add readme
- [ ] MAKE NEW Reflection document !!!!!!!!1
    - [x] ~~Project name, group number, members~~
    - [x] ~~Github repo link~~
    - [ ] Why project is “Highly complex”
    - [ ] Achievements (brief)
    - [x] ~~TABLE with all P0 and P1 requirements and completion rate (if less than 80% need explanation)~~
    - [ ] Highlights and Lowlights
    - [ ] What you've learned
    - [ ] SAVE AND UPLOAD UNDER NAME Group_18_Reflection.pdf
    - [ ] UPLOAD TO A2L UNDER FINAL ASSIGNMENT TOO
- [x] ~~Upload Demo video~~
- [x] ~~Upload poster file~~
- [ ] Presentable production database.
- [ ] provide Teacher and Student logins for grader to use
- [ ] Create Demo assignments for graders and expo

student@gmail.com
Password123

(should provide one more student too)

Include on Git repo:

- Code
- Readme file with clear instructions
    - **The standard here is that the application/website should be run by the TA.** Include everything they need to know to run. Create an account for them on your website/application. Share the credentials in the readme for the test account.
- Final version of SRS, Project Plan, Design Doc and V&V document, demo video, poster file

Reflection document (upload here AND include on your Git repo as well): A 2–4-page document (font 11) with the following components:

Reflection document (upload here AND include on your Git repo as well): A 2–4-page document (font 11) with the following components:

- Your project name, group number, members
- Include a link to your GitHub repo
- **Why is your project 'highly complex'?** What was the main technical challenges you solved.
- Describe your **achievements** briefly. For a project that has an AI component, include your topline metric. If there is an algorithmic innovation, take a page to describe. If the main outcome is a web-based application, say what this app does uniquely.
    - Using AI to produce good text here is ok. But make sure the claims are real.
- A table with **P0 and P1** original requirements and the percentage of completion
    - **If below 80%, explain why** for each req
- Highlights and lowlights
- What you learnt
- Name this file: **Group_XX_Reflection.pdf**

Edited

1) The only old file you need to update is the V&V section of Design Doc where you add the result of your tests. Everything new other than that should go in your 4 page reflection doc.
